

Mouse monoclonal, clone: HMG-1D12

Catalog: M2036 Pack Size: 100µg

Interferon gamma (IFNy) is a dimerized soluble cytokine that is predominately produced by natural killer and natural killer T cells during the innate immune response and by T cells once antigen specific immunity develops. IFNy is crucial for immunity against intracellular pathogens and for tumor control. Release of IFN y is controlled mostly by the cytokines IL-12 and IL-18. Serum IFNy levels have been shown to be elevated in active cases of systemic lupus erythematosus (SLE) and may be associated with the development of autoimmune diseases like SLE.

Description	
Immunogen	HEK293-derived recombinant Golden Hamster IFNγ. Gln24-Ile174.
Reactivity	Hamster
Source	Mouse monoclonal IgG <sub>1</sub>
Purification	Protein G purified from hybridoma cell culture supernatant
Applications	ELISA (Detection)
Formulation	Lyophilized from PBS with Trelahose Reconstitute in 100μL ddH <sub>2</sub> 0 to 1 mg/mL
Shipping	Ambient
Storage	5 years at -20°C to -80°C as supplied 1 month at 4°C after reconstitution with preservative 1 year at -20°C to -80°C after reconstitution
Expiration ————————————————————————————————————	See lot specific CoA
SPL (Log): R-2 = 0.99786  Active Inactive Curve fit  104  105  107  107  108  109  109  109  109  109  109  109	Hamster IFNγ Luminex Assay  Capture: Hamster IFNγ clone HMG-1C1 (Cat # M2037)  Detection: Hamster IFNγ clone HMG-1D12 (Cat # M2036)  Antigen: Recombinant Hamster IFNγ, HEK expressed
Concentration (pg/mL)	Van Dagaayah Hao Only

For Research Use Only
